

MAYAN ALFA

## 48. Long-Term Commercial Protection

Long-term commercial protection was defined as a key protective layer of the MAYAN\_ALFA project.

The project publicly publishes:

- benchmark releases,
- CSV datasets,
- graphs,
- papers,
- and QA summaries.

However,  
the project's greatest value  
remains private.

### Protected Layers

- heuristics,
- optimization logic,
- structural interpretation,
- the Observation Registry,
- topology understanding,
- asymmetry analysis.

### Licensing Model

- public papers → CC BY-NC-ND 4.0
- datasets → CC BY-NC 4.0
- core → All Rights Reserved

Commercial protection enables:

- public reputation,
- DOI continuity,
- while simultaneously preserving protected consulting and interpretive layers.

### Important Principle

**Public release is not the core.**

This strategy protects:

- the project's long-term value,
- future enterprise collaboration,
- and future consulting layers.
