

MAYAN ALFA

## 49. Future Publication Expansion

Future publication expansion represents the roadmap for future publication layers within MAYAN\_ALFA Research.

### Possible Future Publication Layers

- benchmark reports,
- ARM64 specialization papers,
- scaling analysis papers,
- observation summaries,
- methodology releases,
- archive summaries.

Every new publication layer must:

- be audited,
- be DOI-ready,
- be public-safe,
- and use observation-first language.

An important principle is that publication growth must never:

- violate release discipline,
- violate public/private boundaries,
- or expose the interpretive framework.

Future publications are intended to:

- expand reputation,
- expand DOI history,
- expand the benchmark archive,
- and expand observation memory.

Publication expansion must remain:

- slow,
- disciplined,
- realistic,
- and consistent.

This model enables:  
the project's long-term reputational growth.
